You can view this file on screen or print the document to keep it for later. Evidence of the presence of the male hormone 17 alpha-methyltestosterone in normal and malignant mammary tissue. An estimate of the endogenous production of 17 alpha-methyltestosterone in normal and malignant mammary tissue is presented. The assay employed was based on gas chromatographic-mass spectrometric (GCMS) determination of the unconjugated steroid, 17 alpha-methyltestosterone. The results demonstrate that there is an endogenous production of 17 alpha-methyltestosterone which increases slightly with malignant transformation.--TEST--
