whose purpose is to help you prevent your computer from activating the sleep or hibernate mode. It comes in handy especially when you have to run several tasks without interruption, such as carry out a virus scan, defrag your disk, or download videos or songs from the Internet. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to keep your computer awake on the breeze, without having to go through installation steps. Minimalistic GUI You are welcomed by a small panel that embeds only a few configuration settings that you can experiment with. Everything is kept as simple and clear as possible, so even rookies can discover and tweak the program's features in no

time. Main features Basically, it proves to be nothing more than a piece of cake to work with this utility, as you only need to run the EXE file, and the tool automatically activates the “awake” mode. A smart and powerful option bundled in the feature pack empowers you to temporarily disable the Windows Update service. This particularly function prevents your system from automatically restarting after it grabs the necessary updates. Performance The lack of configurable settings makes it an ideal app for rookies. During our testing we have noticed that Stay Awake carries out a task quickly and no errors showed up throughout the entire process. It leaves a minimal footprint on system resources, so it doesn’t hamper computer performance, nor interfere with other programs’ functionality. Bottom line All in all, Stay Awake offers a simple yet efficient software solution

4.9 full download size 20.92 Mb."Triplet" Child-Pugh class A, B, or C: impact on outcomes after orthotopic liver transplantation. The impact of Child-Pugh class on survival after orthotopic liver transplantation (OLT) is unclear. We used a national multicenter database to compare all patients who underwent OLT between 1990 and 2010. A total of 7,969 patients who underwent OLT were divided into three cohorts based on Child-Pugh class: class A, n = 2,127; class B, n = 2,206; and class C, n = 3,342. Mean follow-up was 8 years for class A, 8 years for class B, and 6 years for class C. OLT patients with class C were more likely to be older, have a shorter ICU stay, and have lower rates of retransplantation, hepatic artery thrombosis,
