Ultra File Viewer Free is an application developed to make easy to work with all kinds of files. Office documents, PDFs, images, multimedia files, all require certain applications in order to open and modify them. This utility, however, removes the need for installing dozens of file-related applications, allowing the user to view and alter files that otherwise would be inaccessible. Straightforward explorer The default file explorer changes a bit with every OS iteration, but only aesthetically, as the base architecture seems to stay the same. Ultra File Viewer Free is no different, sporting an intuitive explorer with all the functions and tools necessary, and something extra. To open a file, reach its current path, and click its icon on the preview panel right-side of the UI. If you're viewing a video, a basic integrated player will pop up. For images, a toolbar with zoom in/out features will be launched. Documents and PDF files can be viewed as well as edited. In addition, you can print or encrypt them on the spot. Integrates the Total Commander functionality When launching the app, you'll notice a tracker tab that has the Explorer and Total Commander on display. While the Explorer is described above, the Total Commander tab is a bit more curious. TC is a standalone file manager, but it appears that Ultra File Viewer Free took that file transfer part of TC and applied it. This particular feature allows one to move items between drives with ease, that's why the dual-panel layout exists as such. In summary Ultra File Viewer Free is a handy tool for individuals who prefer to have one tool that does the job of many, or for those with restricted machine rights who cannot install too many programs on their own. Whatever the situation, this application looks capable enough to let you open and view most file formats. Ultra File Viewer Pro Activation Code Features: ? Can handle most all file types? ? What's New In Ultra File Viewer Pro?

On the surface, Ultra File Viewer Pro is an elegant file viewer meant for both Windows and Linux users. But underneath, it's more than just a fancy file manager. More importantly, it's multi-platform, allowing for both Windows and Linux file managers. So what makes this application unique? I'll be taking a closer look at what Ultra File Viewer Pro has to offer on a closer look and examining what it is. Developer: First and foremost, it's good to know that Ultra File Viewer Pro is created by a company called IFWSoft. IFWSoft is a small company based in Latvia, focused on making better software. The company was founded in the year 2004, and has been making software since then. If you are a casual user or a professional, you'll be familiar with the IFWSoft brand. The software is available for Windows and Linux, and has an easy to use interface. Another thing that will be familiar is the 'Refresh' button. The "Refresh" button will allow you to refresh all existing connections. Each time you reload the application, all connections will be cleared, though I'm not sure if they will be re-created. At any rate, Ultra File Viewer Pro is a solid application and it doesn't take long to get used to it. One thing you need to know about this application before you download it is that it is a lot larger than a standard file manager. General UI: When you first open Ultra File Viewer Pro, you'll see a 'Total Commander' section on the left-side of the application. This section contains a small text box that will explain the features of this multi-platform file manager. Once you have clicked that 'Total Commander' link, you'll see a split. On the left is a pane with the file manager, and on the right is a list of options. There isn't a great deal to the UI, but it's nice and clean. File List: The first thing you'll notice when you open the file manager is that the window is split into three panes. At the very top left, you'll see 'Folders', which is a basic folder tree that has all your current folders on there. Currently, there are three main folders on the tree. One for documents, one for videos, and a main folder for all other items. There's also a 'Search' button that will search the current folder. At the top right
