- Create a single or multiple row panorama. - Edit the photo, crop it, zoom in or out, and apply adjustments (brightness, contrast, gamma correction, saturation, red and blue channels, and others). - Rotate the photo using a mouse or the Fn button of the keyboard. - Set the focal length (the distance from the camera to the plane of focus), the aperture of the lens, the camera, and the lens type. - Apply vignetting correction to the image. - Use the automatic mode for perfect adjustments, or manually adjust the setting parameters. - Crop the panorama and resize it using the mouse. - Save the picture file or view the screensaver properties. - Print the panorama image. - Open and edit the selected panorama. - View the panorama properties, such as size, pixel number, focal length, color profile and depth, and others details. A very useful tool and has a lot of options. It has a very good interface and make it easy to configure the panoramic photo by just drag and drop. However, the installation failed to execute the disk image though I uploaded the correct one. Great tool for doing panoramas – assuming the pictures taken are in.jpg or other regular file format not.psd – I upgraded to the newest version and it worked well. Only issue I have now is that my camera captures jpeg strips and it added 10 or 15% of them at the end of each strip and I would like to remove them. PanoramaStudio Pro is a very powerfull tool, easy to use. Unfortunately I have some problems (maybe not known by you) because I have a Dell XPS 13 with the latest Ubuntu 16.04 LTS. First of all, in the proprietary Canon plugin, installed by default, when i open the pictures the tool asks me a password which I don't know. I've tried to remove the plugin for any reason, and when i try to open any picture the error message appears saying "The file format is incompatible". I reinstall the plugin, and a window appears to know which one is the plugin and with which password i should open the pictures. But again the same error appears, and nothing works. I've tried to reinstall the VLC plugin, to reinstall the Ubuntu system, to install OS updates, but without success. I

Overview PanoramaStudio Pro is a professional software application built specifically for helping you create panoramic images. It sports a clean and intuitive layout that allows you to create single or multi-row panoramas, or import a panoramic photo (e.g. BMP, DIB, PSD, GIF) and edit it. Pictures can be uploaded in the working environment using the built-in browse function, so you cannot rely on "drag and drop" operations. The tool works with the following file formats: JPEG, PNG, PSD, PCX, TGA, DCR, RAW, TIFF, and others. PanoramaStudio Pro gives you the possibility to preview the images, zoom in or out, rotate them to different angles, crop the photos, apply masks, and check the image information (filename, file type, size, color depth and profile). You can enable the automatic correction and adjustment modes or manually adjust the brightness, resize the panorama, enhance the image quality, and insert links. You can also print the panorama, save it to an image file or as a screensaver (EXE file format), and view the panorama properties, such as size, pixel number, focal length, color profile and depth, and others details, which can be copied to the clipboard. During our testing we have noticed that PanoramaStudio Pro carries out a task quickly, and no errors showed up throughout the entire process. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not affected. PanoramaStudio Pro Features Single Row to Multi Row Panoramas Create a single row or multi row panorama in just a few steps. Import a Photo Import any panoramic photo in multiple formats (most popular formats: BMP, DIB, PSD, GIF, PCX, TGA, DCR, RAW, TIFF, and others). Basic Crop Quickly crop your panorama with specific resolution and rotation. Rotate and Resize Rotate your image up to 90°, and resize it by dragging the corner grip on the image. Professional Tools Enhance the Image Quality Enhance the image quality in the shortest time, using the selected tools (bicubic, quilted, and others). Smooth the Image Ensure smooth panorama in case of jagged images

System Requirements For PanoramaStudio Pro:

Minimum: OS: Windows Vista SP2 Processor: Intel Core 2 Quad Q9300 @ 2.66Ghz Memory: 2GB DDR3 SDRAM Graphics: DX11 compatible DirectX 11 card with 128MB+ Hard Disk: 2GB+ Additional Notes: 1. Due to problems with the present graphics library the game will not run with under 1GB of VRAM. 2. The game is unfortunately a bit crashy at times and will sometimes freeze for up to a minute. I apologize
